

EU REACH (SVHC) Substances of Very High Concerns

OCP is fully committed to protecting our environment and the world's natural resources. Early adoption and full compliance with the European Union's directive for RoHS has been a focus for OCP during the last several years.

In any of its operations OCP Group does not use SVHC's. As a downstream user of components, OCP relies of the due diligence of its raw material suppliers to comply with OCP's supplier code of conduct and notify OCP should their activities or products require reporting.

Substances of Very High Concerns are declared if about 0.1% of the Article of Regulation (EC) No. 1907/2006 and subsequent amendments. The most current list of SVHC's that OCP is aware of can be found at:

<http://echa.europa.eu/candidate-list-table>

If a part should be incorrectly classified as REACH compliant OCP's liability will only be replacement or credit of the product.
